## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Hartwig US # 4,446,706.

With respect to **claim 1**, Hartwig discloses a washing machine that is driven at a desired, alternative extended number of revolutions/min, (see abstract). Wherein, in Fig. 11 the washing machine 55 provided with a short-circuit asynchronous motor (reads on applicants "squirrel cage motor", as in **claim 2**.

In Fig. 12, Hartwig shows a three-phase rectifier receiving ac power 61, a capacitor shown as a part of rectifier connected to lines 62 and 63. An inverter comprising six switching transistors 64-69 connecting three-phase motor to negative and positive supply lines from the rectifier 60.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2837

4. Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hartwig US # 4,446,706, as applied to claim 1 above, and further in view of Stemmler US # 3,639,820 and Okyama et al. US # 3,949,283.

With respect to **claim 3**, Hartwig do not teach slip rings. However, such limitation in combination with proposed motor can be found in Stemmler. Wherein Stemmler teaches a converter arrangement for feeding a variable ac motor including an adjustment of converter output voltage per phase that is effected by voltage output of a slip ring armature asynchronous machine, (see abstract).

With respect to **claim 4**, Hartwig and Stemmler do not teach presence three-phase transformer in connection to inverter and motor. Such teaching can be found in Okyama et al. disclosure. Wherein Fig. 1 shows such connection.

Hence, it has been obvious to one of ordinary skills in the art, at the time invention was made to use Hartwig teaching on commutation of variable speed asynchronous motor in combination with Stemmler teaching on motor structure including slip-rings and in combination with Okyama et al. teaching on three-phase transformer in motor supply circuit to control asynchronous motor operation with a variable speed control.

The reason to use slip rings is to provide for inverter adjustment to feed ac current motor with regulated current and frequency, in which adjustment of the converter or inverter output voltage per phase is affected by the voltage output of slip ring.

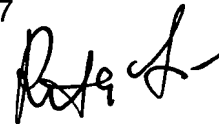

The reason to use three-phase transformer is to convert the three-phase ac voltage of the power supply into a variable dc voltage.
